

# POWER HOUSE SMART LIVING

## PREPARE BEFORE HURRICANE SEASON

### TIP OF THE MONTH

## HAVE YOUR GENERATOR READY FOR THE SEASON

Hi neighbor,  
With hurricane season approaching, it's the perfect time to prep your home—and that starts with ensuring your generator is ready. One of the best ways to keep your system in top shape? Sign up for our Generator Maintenance Plan. It ensures your unit runs when you need it most.

#### **FOR AUTOMATIC STANDBY GENERATORS:**

- Check the status light. If it's green, you're good to go. If it's red, your generator needs service.
- Your control board will show error codes. Review them in your user manual.
- Check your propane levels to make sure your tank has enough fuel.
- Follow all owner's manual safety instructions.
- Initiate a power transfer test (simulate a brief outage) to make sure it kicks on automatically.

#### **FOR PORTABLE GASOLINE GENERATORS:**

- Move it to a well-ventilated outdoor area before starting.
- Add fuel if needed.
- Start it and test run it with a small appliance (lamp, fan, etc.) to confirm it's generating power.
- After hurricane season, drain the fuel for safe storage.
- Follow all owner's manual safety instructions.
